

PROJECT CASE STUDY GOLF COURSE DRAINAGE

Project	Application	Product	Location	Year
New Construction Private Golf Course	Natural Grass Drainage	Hydraway 2000, 6"	Lake Charles, LA	2013-2014

Problem

Needed a drainage system to properly drain the course for quick play after a 3" rain event, which is common in Louisiana.

Solution

Hydraway 2000 installed on entire course for Drainage - Fairways, Bunkers, and Putting Greens.

Result

Excellent results achieved with quick play due to the installation of Hydraway 2000.

“ As larger construction projects begin to include more sand cap fairways, we are utilizing Hydraway more and more within the golf industry. The cost-effective installation allows us to more efficiently budget tighter spacing required with fairway sand cap installation. The durability of the product also gives us a higher level of comfort with an extended-life drainage system. We recommend the use of Hydraway with all of your sports field and golf drainage projects. ”
